1. Claims 7-12 are objected to because the method steps, for example:

Writing an address difference value...;

Increasing a test address...;

Decreasing the test address...;

Applying the first test command...; and

Applying a start command..., should have a flow chart or flow diagram showing these method steps.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-12 rejected under 35 U.S.C. 102(e) as being anticipated by Park (2202/0194557).

As per claims 1 and 6, Part discloses a built-in self test circuit, comprising:

An address generator circuit (120) for generating a test address for testing a memory circuit;

A control circuit (126) connected to the address generator circuit for controlling the address generator circuit...; and

A register (122 or 124) for storing address difference value and connected to the control circuit and to the address generator circuit for driving the address generator circuit to increase or decrease the test address according to the test commands. (See paragraphs (0028) and (0031)).

As per claims 2-4, Park has been discussed above. However, Park does not disclose that the control circuit writes the address value to the register with an aid of a programming command. However, it would have been obvious to a person of skill in the art, at the time the invention to write the address value to the register with an aid of a programming command to save time and labor cost.

As per claims 1-9 and 10-12, these method claims are rejected under similar rationale as set forth in the system claims 1 and 6.

4. Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phung My Chung whose telephone number is 571-272-3818. The examiner can normally be reached on Monday to Friday.
